

Netflix Movies and TV Shows Data Analysis using Python

Objective

Analyze the Netflix dataset to discover insights about Movies and TV Shows, including content trends, ratings, genres, countries, and release years.

Libraries Used

- Pandas
- NumPy
- Matplotlib
- Seaborn

Importing Required Libraries

```
In [1]: import pandas as pd
import numpy as np
import seaborn as sns
import matplotlib.pyplot as plt
```

Reading the CSV File

```
In [2]: data = pd.read_csv(r"C:\netflix movies and tv shows analysis\netflix_titles.csv")
```

```
In [4]: print(data)
```

	show_id	type	title		director	\

Dataset Information

The dataset contains information about Netflix Movies and TV Shows such as:

- Show id
- Type
- Title
- Director
- Cast
- Country
- Date Added
- Release Year
- Rating
- Duration
- Listed In
- Description

.info()

```
In [5]: data.info()
```

```

Netflix Dataset EDA Questions

1. Content Distribution

Q1. How many Movies and TV Shows are available on Netflix?

```
In [26]: data['type'].value_counts()
```

```
Out[26]: type
Movie      6131
TV Show    2676
Name: count, dtype: int64
```

Q2. What is the percentage distribution of Movies vs TV Shows?

```
In [27]: (data['type'].value_counts(normalize=True) * 100).round(2)
```

```
Out[27]: type
Movie      69.62
TV Show    30.38
Name: proportion, dtype: float64
```

Release Year Analysis

Q3. Which year had the highest number of Netflix releases?

```
In [28]: data['release_year'].value_counts().head(10)
```

```
Out[28]: release_year
2018      1147
2017      1032
2019      1030
2020       953
2016       902
2021       592
2015       560
2014       352
2013       288
2012       237
Name: count, dtype: int64
```

Q4. How has Netflix content grown over the years?

```
In [29]: content_growth = data['release_year'].value_counts().sort_index()
print(content_growth)
```

```
release_year
1925         1
1942         2
1943         3
1944         3
1945         4
...
2017      1032
2018      1147
2019      1030
2020       953
2021       592
Name: count, Length: 74, dtype: int64
```

Visualization

```
In [30]: plt.figure(figsize=(12,4))
